1. Overview

Page **5 of 86** 

### 1. Overview

The aim of this document is to present all validation controls to be applied on messages processed in the ASI.

The messages used by the following functions are described in the next chapters:

- 1: input payment messages,
- 2: input control messages,
- 3: management of settlement procedures,
- 4: operational control of procedure 6,
- 5: management of disagreement,
- 6: management of output messages.

2. Validation control rules applied to input messages

Page 6 of 86

### 2. Validation control rules applied to input messages

### 2.1. Function "Input payment messages"

### 2.1.1. Functional controls to be applied on MT202

1) The type of the MT202 sent by a Settlement Bank to the ASI depends on the field 57A:

#### If field 57A is filled:

The MT202 credits a Technical account - procedure 6 real-time (field 57A) for **Real-time AS** in the framework of the procedure1 (Day trade phase) or procedure 6 (Daylight). The Technical account - procedure 6 real-time is credited then the AS is notified by an ASTransferNotice sent by ASI.

### o If field 57A is empty:

The MT202 credits one of its sub-accounts (field 58A) used by an **Interfaced AS** (this MT202 is rejected if the sub-account is asked to be increased outside of a procedure 6 open during the Day trade phase).

[CR 327] In case of payment transferring liquidity from the RTGS Account to the Sub-Account, the AS is notified immediately, on an optional basis, during a cycle by ReturnAccount. The cycle can be opened or closed.

2) [CR 329] the type of the MT202 sent by a CB to the ASI:

#### o Real-time

In case of MT202 to Technical account - procedure 6 real-time it must be checked that if field 72 contains the codeword /MANPAY/ then:

- The sender BIC must be the responsible CB of the AS of the Technical account procedure 6 real-time.(If not MT202 will be rejected with error code C8)
- Field 52a must be filled with the BIC of a settlement bank of the AS (This settlement bank is not necessarily a participant of the CB's banking community).
- Field 72 must be filled with codeword /ASINF/ before /MANPAY

#### Interfaced

In case of MT202 to sub account (Interfaced) it must be checked that if field 72 contains the codeword /MANPAY/ then:

- The sender BIC must be the responsible CB of the AS related to the sub account (in field 58). (If not MT202 will be rejected with error code C8)
- Field 52a must be filled with the BIC of the settlement bank of the AS.
- Field 58a must contain the same settlement bank BIC as in field 52a.
- Field 72 must be filled with codeword /ASINF/ before /MANPAY
- 3) [CR 342] Revocation of the MT202:

2. Validation control rules applied to input messages

Page **7 of 86** 

In the context of the CR 342, it is now possible for Settlement banks (and for central banks) to revoke an MT202 sent to the ASI. (For all cases of an MT202)

The screen display "Select payment" (DFS ICM 03-01-02) will be modified by adding the button "revoke" for the settlement bank and Central Bank.

### MT202 are sent to the Receiving address TRGTXEPMASI

|     |          |  |  | E8            |
| 58a | M        | Final beneficiary account to be credited on the SSS (identified by a BIC and/or the account number on the SSS) | Interfaced AS Option A only: - Must be the BIC of the RTGS account of the sender - Must be a sub-account of this RTGS account  | C8<br>B3      |
|     |          |  | Real-time AS Option D: No check It will be mapped in the name of the creditor Option A: No check The BIC will be mapped in the BIC of the Creditor sent to the AS in the ASTransferNotice  If account number is filled, it will be mapped in the identification of the Creditor sent to the AS in the ASTransferNotice |               |
| 72  | 0        | Sender to Receiver Information   | The information following the codeword /ASINF/<br>will be mapped in the field 72 of MT900/910 and in<br>the RemittanceInformation of the ASTransferNotice<br>sent to the AS  | D6            |

NB: If a FIN message different from MT202 is received by ASI module, it will be rejected with Abort reason code: "A6"

2. Validation control rules applied to input messages

Page 10 of 86

### 2.1.2. Functional controls to be applied on ASTransferInitiation

The ASTransferInitiation is composed of 2 parts:

- the GroupHeader
- the PaymentInformation

Several PaymentInformation can be included in the message. The ASI will accept one and only one PaymentTransaction by PaymentInformation.

[CR-313]

For a given ASTransferInitiation, the number of PaymentInformation cannot be superior to a maximum. This maximum is a parameter inside the PM changeable by the LLS. Any ASTransferInitations received with more than the allowed number of transactions, are validated false with the error code A005 – Invalid number of transactions. The initial value of the parameter is 20.000.

#### Identification of the AS

When the message is sent by a CB (on behalf of the AS) or by the SSP operator, then the BIC of the AS is filled in the InitiatingParty

#### Settlement

The accounts in the SSP which must be settled by the PM are defined by the FirstAgent and the FinalAgent. These two attributes are mandatory in each transaction.

The Settlement module has to debit the FirstAgent and to credit the FinalAgent.

The Debtor and the Creditor are optional.

The Debtor is used to define an ordering institution before the FirstAgent

The Creditor is used to define a beneficiary after the FinalAgent.

2. Validation control rules applied to input messages

Page **11 of 86** 

#### **Addressing Validation Tables**

These tables are used by the ASI to validate in the ASTransferInitiation the BIC and accounts which are requested to be debited and credited in the SSP.

### General rules:

- The field FirstAgent of the messages sent by an AS or a CB on behalf of an AS, or by the SSP operator must contain BICs (Settlement Bank, Technical account, Technical account procedure 6 real-time, auto-collateral account) which are relative to this AS.
- In the DomesticAccount of the FirstAgent, when a sub-account is filled, it must also be relative to this AS
- The field FinalAgent of the messages sent by an AS or a CB on behalf of an AS or by the SSP operator must contain BICs (Settlement Bank, Technical account, Technical account procedure 6 real-time, auto-collateral account) which are relative to this AS or relative to the counterpart AS when this one is precised.
   [CR-489] IF First and/or Final agent on a transaction of a AsTransferInitiation message procedure 3 is not relative to the AS or is invalid, then only this transaction is rejected, The other correct transactions are processed normally
- In the DomesticAccount of the FinalAgent, when a sub-account is filled, it must also be relative to this AS or relative to the counterpart AS when this one is precised

The following transactions are declared "Invalid" with error code "A034" if they are received by the ASI module when the cycle is not open (night-time or daylight). The operations concerned by this rule are:

- Automatic increase/decrease of liquidity by connected payment on SSP account (code: CSP)

2. Validation control rules applied to input messages

Page **13 of 86** 

- Automatic increase/decrease of liquidity with credit lines managed in proprietary home account (code: CHA)
- Mandated payments with debit/credit of auto-collateral account (code: COL)
- Liquidity increase/decrease for repo countries (code: REP)
  Automatic increase of blocked liquidity by specific transactions (code: STR)
- Settlement (code: SET)- Cross AS settlement (code: CDS)

The cross-AS settlement is an ASTransferInitiation sent to the ASI module with the elements indicated in the following validation table. After settlement, these elements are sent by the PM to the AS receiver in an ASTransferNotice.

An ASTransferInitiation should contain only one specific transaction "CDS" in order to receive one dedicated ASInitiationStatus.

It will not be possible anymore for any ancillary system using the "procedure 6 - real-time" to close the procedure manually. Any attempt will generate a ReturnGeneralBusinessInformation (camt.021) with the error code A094 "AS with procedure 6 – real-time cannot close the procedure."

In practice, TARGET2 will automatically open the night time settlement procedure for all AS 6 procedures on 19:30h at D and close it automatically at 18:00h on D+1 for all AS 6 procedures without any intervention of any ancillary system using the "procedure 6 - real-time". Finally, this means that there will be no use anymore for the daylight procedure (nevertheless, the functionality of daylight procedure is not removed from the system).

It will not be necessary anymore for the sending ancillary system using AS 6 real-time to open a cycle for submitting a "Cross AS settlement" transaction. Nevertheless, the cycle-functionality will not be removed from the AS procedure 6 real-time (i.e. theoretically, an AS using this procedure could open or close cycles). In case the AS opens a cycle, it has to take into account that the liquidity is blocked (i.e. current orders to or from the "AS technical account – procedure 6 real-time" are queued till the end of the cycle).

The "Cross AS settlement" of AS 6 Interfaced is not impacted by these changes (i.e. an AS using procedure 6 Interfaced still has to open a cycle to be able to send a "Cross AS settlement".

\_

<sup>2</sup> The main account will be credited if the DomesticAccount of FinalAgent is empty

### (1) Reference of file

The reference of file allows to assure the unicity of the file.

It is composed of:

BIC (11 characters) of the sender of the message + GroupIdentification It must be unique over a period of 5 business days

The reference of file allows to check the duplication of the messages.

2. Validation control rules applied to input messages

Page 22 of 86

### (2) SettlementModelType

Specifies the generic settlement Procedure

| Code | Code Name   | Definition                                 |
|------|-------------|--|
| 1000 | Procedure 1 | Liquidity transfer                         |
| 2000 | Procedure 2 | Real time settlement                       |
| 3000 | Procedure 3 | Bilateral settlement                       |
| 4000 | Procedure 4 | Standard multilateral settlement           |
| 5000 | Procedure 5 | Simultaneous multilateral settlement       |
| 6000 | Procedure 6 | Settlement on dedicated liquidity accounts |

### (3) PaymentScheme Codes for Procedure 6

| Code | Code Name                                 | Definition  |
|------|---|---|
| CUO  | Model 6 Current Order                     | Current order sent by an AS on behalf of a Settlement Bank  |
| CSP  | Model 6 Connected SSP                     | Automatic increase of liquidity by connected payments on SSP account  |
| CHA  | Model 6 Credit line Home Account          | Automatic increase of liquidity with credit lines managed in proprietary home account   |
| COL  | Model 6 Auto-Collateral                   | File of mandated payments to debit AS Auto collateral account and credit sub-accounts of Settlement Banks   |
| CDS  | Model 6 Cross-AS settlement               | Cross-AS settlement between two AS  |
| REP  | Model6 Auto-collateral for repo countries | Automatic increase of blocked liquidity by auto-<br>collateralisation for repo countries  |
| STR  | Model 6 Specific Transactions             | Increase of dedicated liquidity triggered by specific transactions  |
| SET  | Model 6 Settlement                        | Settlement  |
| SOR  | Model 6 Standing Order                    | Code used only in ASTransferNotice to notify to the AS the funds booked on the Technical account - procedure 6 real-time after standing order execution |

#### (4) Reference of transaction

The reference of transaction allows to assure the unicity of the transaction.

The sender is an AS, the CB or the OT which sends on **behalf of the AS**, the reference is composed of:

# BIC (11 characters) of the AS which initiates the transaction + InstructionIdentification It must be unique over a period of 5 business days

The reference of transaction allows to check the duplication.

2. Validation control rules applied to input messages

Page **23 of 86** 

### 2.1.3. Functional controls to be applied on SBTransferInitiation

The SBTransferInitiation message is sent by a Settlement Bank to the ASI, via ICM, to debit its RTGS Account in order to increase the liquidity on the Technical account - procedure 6 real-time of a Real-time AS.

The SBTransferInitiation is checked by the ASI before to be sent to the SM.

### The Settlement module has to debit the FirstAgent and to credit the FinalAgent.

The Debtor and the Creditor are optional.

The Debtor is used to define an ordering institution before the FirstAgent

The Creditor is used to define a beneficiary after the FinalAgent.

#### **SBTransferInitiation**

| Field                                | M<br>/<br>0 | Contents   | Validation   | Error<br>code |
|--------------------------------------|-------------|--|--|---------------|

| - RemittanceInformation              | 0   |  |   |      |
| Unstructured                         | М   | Shall be mapped to the remittance information of the payment transaction branch of the ASTransferNotice sent to the AS | FIN set of characters   |      |
|                                      |     | Shall be mapped to the MT 900 with code-word /ASINF/   |   |      |

### (1) Reference of transaction

The reference of transaction allows to assure the unicity of the transaction. It is composed of:

### BIC (11 characters) of the Settlement Bank + MessageIdentification

It must be unique over a period of 5 business days

The reference of transaction allows to check the duplication.

2. Validation control rules applied to input messages

Page **25 of 86** 

### 2.1.4. Functional controls to be applied on LiquidityCreditTransfer

The LiquidityCreditTransfer message is sent to the ASI, via ICM, by a Settlement Bank to increase or decrease the liquidity on a sub-account (Interfaced Models)

The LiquidityCreditTransfer message is checked by the ASI before to be transmitted to the PM.

| Field   | M /<br>O | Contents   | Validation   | Error<br>code |
|---|----------|--|--|---------------|
| Sender of the message   | М        | DN of the Settlement Bank  |  | A001          |
| Receiver of the message   | М        | DN of the PAPSS  |  |               |
| - MessageIdentification   | М        |  |  |               |
| Identification  | М        | Unique and unambiguous reference assigned by the Settlement Bank to identify the message                             | ASI checks the unicity of the operation  | A020          |
|   |          | identity the message   | The length is limited to 16 alphanumerical FIN set characters (no slashes allowed)                                   | A012          |
| - TransferredAmount   | М        |  |  |               |
| AmountWithoutCurrency   | М        | Amount   | The amount must be compatible with the format 15d used in FIN messages   | A024          |
| -CreditAccount O Filled if Liquidity transfer from account to sub-account |          | Filled if Liquidity transfer from main-<br>account to sub-account  |  |               |
| -Identification M   |          |  |  |               |
| DomesticAccount M   |          | Sub-account number to increase   | ASI checks the validity of the sub-account<br>The LiquidityCreditTransfer between two<br>sub-accounts is not allowed | A028          |
| -Type   | М        |  |  |               |
| AccountType   | М        | "SACC"   | The value must be "SACC"   | 2853          |
| -DebitAccount   |          |  |  |               |
| -Identification   | М        |  |  |               |
| DomesticAccount         M         Sub-account number to be decreased      |          | ASI checks the validity of the sub-account<br>The LiquidityCreditTransfer between two<br>sub-accounts is not allowed | A027   |               |
| -Type   | М        |  |  |               |
| AccoutType  | М        | "SACC"   | The value must be "SACC"   | 2853          |

### 2.2. Function "Input control messages"

### 2.2.1. Functional controls to be applied on ReturnGeneralBusinessInformation

The ReturnGeneralBusinessInformation is a **Standard CashManagement message** used by the AS to order the start and the end of procedures and cycles.

This message could also be used by the CB on behalf of the AS or by the Operational Team; in this case the BIC of the AS must be filled in "SubjectDetails"

| Field                 | M /<br>O | Contents     | Validation  | Error<br>code |
|-----------------------|----------|--------------|---|---------------|
| Sender of the message | M        | - DN of a CB | When the DN is relative to a CB or the SSP operator, then the Tag "SubjectDetails" must be filled with a BIC of an authorised AS. | A001<br>A002  |

2. Validation control rules applied to input messages

Page **26 of 86** 

|                                   |   |   | If the sender is a CB then the AS must be a member of this CB.  |      |
|-----------------------------------|---|---|---|------|
|                                   |   | - DN of an AS   | The AS must be in the list delivered to ASI by Static Data  | A001 |
| Receiver of the message           | М | - DN of the ASI   |   |      |
| - MessageIdentification           | М |   |   |      |
| Identification                    | М | Reference assigned by the AS to identify the message  | ASI checks the unicity of the reference of operation (1)  | A020 |
| - BusinessReport                  | М | Mandatory Choice for the AS   |   |      |
| - GeneralBusinessReport           | М |   |   |      |
| BusinessInformation-<br>Reference | М | Unique and unambiguous identification of a general business information system as assigned by the AS. | ASI checks the unicity of the identification for the business day   | A019 |
|                                   |   |   | The length is automatically limited by the schemaFile to 16 alphanumerical FIN set characters (no slashes allowed)  |      |
| - GeneralBusiness-                | М | Mandatory Choice for the AS   |   |      |
| Information                       |   |   |   |      |
| - Qualifier                       | М |   |   |      |
| IsFormatted                       | М | The information sent by AS must be formatted  | ASI checks that the indicator is "true"   | A029 |
| Subject                           | М | Code of the order sent by the AS  | ASI checks the validity of the code (2)   | A030 |
|                                   |   |   | ASI checks the validity of the sequence requested   | A034 |
|                                   |   |   | ASI checks the right of an AS to close a Procedure  | A094 |
| SubjectDetails                    | 0 | It is filled with the BIC of the AS when the file is sent by the CB on behalf of the AS               | If the sender is a CB or the SSP operator, then this field must be filled with a BIC of an authorised AS.  If the sender is a CB then the AS must be a member of this CB. | A002 |
|                                   |   |   | If the sender is not a CB then this field is ignored.   |      |

### (1) Reference of operation

The reference of operation allows to assure the unicity of the operation It is composed of:

BIC (11 characters) of the sender of the message + Identification of the message It must be unique over a period of 5 business days

The reference of operation allows to check the duplication of the messages.

### (2) Code of the order sent by the AS

Night-time procedure

| Code          | Definition                 |
|---------------|----------------------------|
| OVN-CYCL-OPEN | Open Night-time Cycle (*)  |
| OVN-CYCL-CLOS | Close Night-time Cycle (*) |

2. Validation control rules applied to input messages

Page **27 of 86** 

| OVN-PROC-CLOS | Close Night-time Procedure (Interfaced AS only) |
|---------------|---|
|---------------|---|

#### Daylight procedure

| Code          | Definition                                    |
|---------------|---|
| DAY-PROC-OPEN | Open Daylight Procedure (Interfaced AS only)  |
| DAY-CYCL-OPEN | Open Daylight Cycle (*) (Interfaced AS only)  |
| DAY-CYCL-CLOS | Close Daylight Cycle (*) (Interfaced AS only) |
| DAY-PROC-CLOS | Close Daylight Procedure (Interfaced AS only) |

(\*) The AS may execute several cycles during Night-time or Daylight.

In specific cases, the AS (or the CB on behalf) may also close a procedure without having executed cycles.

Depending of the actual state of the AS, the ASI checks the validity of the coming order which must respect the above order of the sequence for Daylight procedure or for Night-time procedure.

If a night-time procedure was open, it is a pre-requisite that an end of procedure message for night-time procedure is sent before to open a daylight procedure.

If the AS is excluded, it can no more Start/End of Procedure/Cycle itself by A2A or U2A. Only the responsible CB or the SSP can Start/End of Procedure/Cycle of an excluded AS.

2. Validation control rules applied to input messages

Page 28 of 86

### 2.2.2. Functional controls to be applied on Receipt

The Receipt is a **Standard Cash Management message** sent by the AS to indicate the positive or negative decision to use the Guarantee Mechanism.

The Receipt could also be sent by the CB on behalf of the AS or by the Operational Team, in this case the BIC of the AS must be filled in the element "Description".

- The Receipt is sent on Reception of **ASInitiationStatus** with the **DecisionIndicator** filled with "True" (possibility to use the Guarantee Mechanism)
  - → The StatusCode of the receipt will indicate the positive ("YES") or negative ("NO") **decision** to use the Guarantee mechanism.

| Field                   | M / | Contents  | Validation   | Error        |
|-------------------------|-----|---|--|--------------|
|                         | 0   |   |  | code         |
| Sender of the message M |     | - DN of the CB - DN of the AS   | When the DN is relative to a CB or<br>the SSP operator, then the Tag<br>"Description" must be filled with a<br>BIC of an authorised AS.<br>If the sender is a CB the AS must<br>be a member of this CB | A001<br>A002 |
|                         |     |   | The AS must be in the list delivered to ASI by Static Data   |              |
| Receiver of the message | М   | DN of the ASI   |  |              |
| - MessageIdentification | М   |   |  |              |
| Identification          | М   | Reference assigned by the AS to unambiguously identify the Receipt message.   |  | A020         |
| - ReceiptDetails        | М   | (Element added with CAMT2008)   |  |              |
| - RelatedReference      | М   |   |  |              |
| Reference M             |     | "GroupIdentification" reference of the original message for which an ASInitiationStatus is received by the AS (or the CB on its behalf) | When a second receipt is received with the same related reference, it is rejected.   | A031         |
| - RequestHandling       | 0   |   |  |              |
| StatusCode              | М   | "YES" or "NO"   |  | A030         |
| Description 0           |     | It is filled with the BIC of the AS when<br>the message is sent by the CB on behalf<br>of the AS  | If the sender is a CB or the OT, then this field must be filled with the BIC of the AS relative to the ASInitiationStatus received. If the sender is not a CB or the OT then this field is ignored.    | A002         |

[CR-811] Technical solution implemented, to prevent job abend. The technical hint is that the AS is already identified by the DN of sender of the message. Since the BIC of the AS is unique, the BIC of the AS could be derived from the DN of the sender and be used for ASI processing.

Note: The rules linked to the Receipt AS are not modified

- The XML tag "Description" of the Receipt AS is optional.
- If the message is sent by the CB on behalf of the AS, this XML tag has to be filled with the BIC of the AS.
- If the sender is not a CB or the OT, then this field is ignored.

3. Building up of output messages

Page 29 of 86

### 3. Building up of output messages

### 3.1. Function "Management of output MT202 message"

This MT202 is build-up to be sent by the PM to a Settlement Bank, except Internet-based SB, on a liquidity transfer (Procedure 1) from the Technical account - procedure 6 real-time.

#### MT202

| Tag | M /<br>O | Field   | Contents   |
|-----|----------|---|--|
|     | M        | Sender of the message                               | The sender is the BIC : TRGTXEPMASI  |
|     | М        | Receiver of the message:                            | The receiver is the BIC defined as FinalAgent in the ASTransferInitiation sent by the AS   |
| 20  | М        | Transaction Reference Number                        | Reference assigned by the ASI to identify the MT202 being sent   |
| 21  | М        | Related reference                                   | Copy from EndToEndIdentification contained in the<br>PaymentTransaction part. (16x)  |
| 13C | 0        | Time Indication                                     | Not relevant   |
| 32A | М        | Value Date, Currency, Amount                        | Copy from InstructedAmount Payment is sent for the current business day Payment must be denominated in euro only   |
| 52A | 0        | Ordering Institution                                | <ul> <li>If a valid BIC is indicated as Debtor in the ASTransferInitiation:         Option A:         Copy of the account (adjusted to format /34x) from the DebtorAccount (if filled) and         Copy of the BIC indicated as Debtor     </li> <li>If no BIC is indicated as Debtor, the field 52A will be empty.</li> </ul> |
| 53a | 0        | Not relevant  | Must not be filled   |
| 54a | 0        | Not relevant  | Must not be filled   |
| 56a | 0        | Not relevant  | Must not be filled   |
| 57A | 0        | Not relevant  | Must not be filled   |
| 58a | M        | Final beneficiary account to be credited on the SSP | - If a valid BIC is indicated as Creditor in the ASTransferInitiation Option A: Copy of the account (adjusted to format /34x) from the CreditorAccount (if filled) and Copy of the BIC indicated as Creditor  - If no BIC is indicated as Creditor, the field 58A will be filled only with the BIC of the FinalAgent           |
| 72  | 0        | Sender to Receiver Information                      | The first line of field 72 is always filled with the code word "/INS/" followed by the BIC of the Technical account - procedure 6 real-time from FirstAgent in the PaymentTransaction part :   |

3. Building up of output messages

Page 30 of 86

|  | /INS/ "BIC of the Technical account - procedure 6 real-time"   |  |
|--|--|--|
|  | The other lines are mapped with the optional elements of the ASTransferInitiation according to the rules indicated below (*) |  |

#### (\*) Mapping rules for optional elements in field 72 according to the ASTransferInitiation:

- **If Debtor Name** is present it will be filled in the field 72.
- **If Debtor Name and BIC** are not present, the Debtor Domestic Account (if present) will be filled in the field 72.
- **If Creditor Name** is present it will be filled in the field 72.
- If Creditor Name and BIC are not present, the Creditor Domestic Account (if present) will be filled in the field 72

#### Codeword

The elements of ASTransferInitiation to fill in the field 72 are introduced by specific codeword used in the following order:

/INS/ (BIC of the Technical account - procedure 6 real-time)

/ASDB/ (Debtor Name or Debtor Domestic Account)

/ASCR/ (Creditor Name or Creditor Domestic account)

/ASINF/ (RemittanceInformation)

The Debtor Name (70x) and Creditor Name (70x) are limited to **62 characters** 

- Example of field 72 with the maximum data length for /ASDB/ and /ASCR/:

```
/INS/ 11x
/ASDB/ 29x
// 33x
/ASCR/ 29x
// 33x
/ASINF/ 28x
```

In ASTransferInitiation, the format of RemittanceInformation is: 140x

As the field 72 is limited to 6 lines of 35x, the contents of RemittanceInformation will be truncated according to a dynamically handling of the remaining lines after the previous codewords.

- Example of field 72 with no elements for /ASDB/ and /ASCR/. In this case the maximum length of RemittanceInformation (140X) will not be truncated:

```
/INS/ 11x
/ASINF/ 28x
// 33x
// 33x
// 33x
// 13x
```

3. Building up of output messages

Page **31 of 86** 

### 3.2. Function "Management of output ASInitiationStatus messages"

The ASInitiationStatus is used by the ASI to inform the sender of the ASTransferInitiation of the result of the process of the file.

This message could be used in the following cases:

- To reject invalid input file for error (Procedures 1 to 6)
- To confirm a partial execution with result on each transaction (Procedure 1, 2, 3, 6)
- To confirm the complete execution of the transactions (Procedures 1 to 6)
- To confirm the complete reject of the file for failure or disagreement (Procedures 1 to 6)
- [CR-361] To confirm the reject of XML transactions for revocation (Procedures 1, 2, 3)
- [CR-361] To confirm the complete reject of the file for revocation (Procedures 4, 5)
- To ask to the AS for the use of the Guarantee Mechanism (Procedures 4 and 5)
- To confirm the reverse of file when the Guarantee Mechanism is not used (Procedures 4 and 5)

According to these cases, the use of Status and Reason at file level or transaction level is indicated in the following table

3. Building up of output messages

Page **32 of 86** 

### 3.2.1. Use of Status and Reason at file level and transaction level

|                       |                   | Invalid input<br>erre   |  | Request for decision  | Complete<br>reject after<br>reverse  | Reject or<br>Partial execution   | Complete execution  | Complete reject<br>for global failure<br>or disagreement   |
|-----------------------|-------------------|---|--|---|--|--|---|--|
| Header                | DecisionIndicator | -   | -  | true (*)  |  | -  | -   | -  |
| (Group<br>level)      | GroupStatus       | Invalid   | Invalid  | PartiallyExecuted   | Reversed   | PartiallyExecuted  | AcceptedSettled   | Rejected<br>RejectedDisagreement   |
|                       | StatusReason      | Error code  | -  | -   | Global reason  | -  | -   | Global Failure reason  |
| Payment<br>level      | TransactionStatus |   | Invalid  | AcceptedSettled<br>Rejected   | Reversed<br>Rejected   | AcceptedSettled<br>CurrtOrderPartiallySettled<br>Rejected<br>RejectedDisagreement  | -   | -  |
|                       | StatusReason      |   | Error Code   | Failure reason  | Failure reason   | Failure reason   | -   | -  |
| Comments              |                   | All the file is invalid for an error in the Header or a general error. The message contents only the header with the GroupStatus and error code in StatusReason | All the file is invalid but the repetitive part contents the references of the only erroneous transactions with their error code | The decision of the use of the Guarantee Mechanism is requested. The message lists the references of all transactions with their status | The global failure reason is 'negative decision' or 'lack of liquidity' on the guarantee account or 'exclusion of SB' The message lists the references of all transactions with their final status | The message lists the references of <b>all transactions</b> with the individual failure reason in case of "Rejected" In case of procedure 3, according to an option in SD, there is a unique notification which lists all transactions or there is a single notification sent for each transaction | All the file is accepted and settled, the message contents only the header with the GroupStatus | All the file is rejected for global failure or disagreement, the message contents <b>only the header</b> with the GroupStatus and StatusReason ( failure reason if "Rejected") |
| Used in<br>Procedures |                   | 1 to 6  | 1 to 6   | 4, 5  | 4, 5   | 3, 6   | 1 to 6  | 1 to 6   |

<sup>(\*)</sup> When the Guarantee mechanism is available, the ASI fills the DecisionIndicator with "true", and then the ASI is waiting for the Receipt which contains the positive or negative decision from the AS.

3. Building up of output messages

Page **33 of 86** 

### **Group level**

### **PaymentGroupStatusCodeT**

| Code | Code Name                    | Definition   |
|------|------------------------------|--|
| ACSC | AcceptedSettlementCompl eted | Settlement has been completed for all the transactions in the file There is no list of single positions in the ASInitiationStatus.   |
| INVL | Invalid                      | The input file cannot be processed because of data error   |
| PART | <u>PartiallyExecuted</u>     | A number of transactions (or none) have been executed, whereas another number of transactions have not achieved 'Settled' status.  The status of each transaction is indicated in the list of single positions at Payment level. |
| RJCT | Rejected                     | Payment initiation or individual transaction included in the payment initiation has been rejected or revoked. The whole file is rejected.  |
| REVR | Reversed                     | The file which was previously "PartiallyExecuted" is now totally rejected after a reversing procedure of the transactions which were settled   |
| RJDA | RejectedDisagreement         | CB disagrees for the case of exclusion. The whole file is rejected.  |

#### **Status Reason**

When the StatusReason is used at Group Level, it is always indicated with the choice "BillaterallyAgreed" (Max4AphaNumericText).

This status is used in two cases:

- > Error at Group level in the input file which is invalid ("INVL"). The status indicates the error code (See § 3.8 "List of error codes")
- ➤ Reversed file ("REVR") or Rejected file ("RJCT", "RJDA"). In this case the following table is used to give the reason of reverse or reject of the file:

#### **Global StatusReason at Group level**

| Code | Code Name                       | Definition  |
|------|---------------------------------|---|
| EXAS | <u>ExclusionAncillarySystem</u> | The whole file is rejected because the AS is excluded |

3. Building up of output messages

Page **34 of 86** 

| EXSB | ExclusionSettlementBank              | The whole file is rejected because it contains a transaction relative to an excluded Settlement bank      |  |
|------|--------------------------------------|---|--|
| DPNS | <u>DaySettlementPeriodNotStarted</u> | Daylight settlement period has not started  |  |
| GANR | GuaranteeAccountNotRequested         | The file is reversed after an AS decision to not use the Guarantee Account                                |  |
| GALL | GuaranteeAccountLackLiquidity        | The file is reversed after an AS decision to use the Guarantee Account but there is a 'lack of liquidity' |  |
| RDIB | RejectedDecreaseInsufficientBalance  | File rejected due to insufficient balance in the account to be decreased                                  |  |
| RVOK | Revoke                               | The file has been revoked   |  |
| RJSP | <u>RejectedSettlementPeriod</u>      | The file is rejected because the Settlement period time is reached.                                       |  |

### **Payment level**

### **PaymentTransactionStatusCodeT**

| Code | Code Name                           | Definition   |
|------|-------------------------------------|--|
|      |                                     |  |
| ACSC | <u>AcceptedSettlementCompleted</u>  | Settlement has been completed.   |
| COPS | <u>CurrentOrderPartiallySettled</u> | Current order from AS has been partially or not settled for insufficient liquidity in RTGS account |
| INVL | Invalid                             | The input payment cannot be processed because of data error  |
| RJCT | Rejected                            | Individual transaction included in the payment initiation has been rejected or revoked.            |
| REVR | Reversed                            | Reject of a transaction which was previously settled   |
| RJDA | RejectedDisagreement                | CB disagrees for the case of exclusion. The transaction is rejected                                |

### **Status Reason**

When the Status Reason is used at Payment Level, it is always indicated with the choice "BilaterallyAgreed" (Max4AphaNumericText).

3. Building up of output messages

Page **35 of 86** 

#### This status is used in two cases:

- > The payment in the input file is invalid ("INVL"). The status indicates the error code (See § 3.8 "List of error codes")
- ➤ A specific payment has the PaymentTransactionStatusCodeT 'Rejected' ("RJCT" or "RJDA"), the reason of this reject is specified in the following table:

### StatusReason for reject at payment level

| Code | Code Name                            | Definition  |
|------|--------------------------------------|---|
| EXSB | <u>ExclusionSettlementBank</u>       | The transaction is rejected because it is relative to an excluded Settlement bank |
| RVOK | <u>Revoke</u>                        | The payment has been revoked  |
| RJSP | <u>RejectedSettlementPeriod</u>      | The payment is rejected because the Settlement period time is reached.            |
| DPNS | <u>DaySettlementPeriodNotStarted</u> | Daylight settlement period has not started  |
| RDIB | RejectedDecreaseInsufficientBalance  | Decrease order rejected due to insufficient balance                               |
| GENE | <u>GenericError</u>                  | Generic error   |

3. Building up of output messages

Page **36 of 86** 

# 3.2.2. Building up ASInitiationStatus to reject the input ASTransferInitiation for a general error

When the ASInitiationStatus is sent to invalid the complete ASTransferInitiation message for general error, it is reduced to the first mandatory part GeneralInformation / OriginalGroupReferenceInformationAndStatus which contains the GroupStatus and the StatusReason. The repetitive optional parts which refer the transactions are not specified:

### **Usage of Status and Reason**

|          |                   | Invalid input file for data error  |
|----------|-------------------|--|
| Header   | DecisionIndicator |  |
| (Group   | GroupStatus       | Invalid  |
| level)   | StatusReason      | Error code   |
| Payment  | TransactionStatus | -  |
| level    | StatusReason      | -  |
| Comments |                   | All the file is invalid because of an error in the Header or a general error The message contents <b>only the header</b> with the GroupStatus and error code in StatusReason |

### **GeneralInformation (ASInitiationStatus)**

| Field  | M /<br>O | Contents   |
|--|----------|--|
| Sender of the message                        |          | DN of the ASI  |
| Receiver of the message                      |          | DN of the sender of the ASTransferInitiation   |
| - GeneralInformation                         | М        |  |
| PaymentInitiationStatusIdentification        |          | Reference assigned by the ASI to unambiguously identify the status message                       |
| CreationDateTime                             | М        | Date and time at which the status message was created by the ASI                                 |
| - OriginalGroupReferenceInformationAndStatus |          |  |
| GroupIdentification                          |          | Filled with the field "GroupIdentification" of the original message.                             |
| OriginalMessageType                          | М        | Specifies the message type for which the status is reported ("ASTransferInitiation")             |
| SettlementModelType                          | М        | Identify the procedure of payment indicated in the original message                              |
| DecisionIndicator                            |          | Not used in this case  |
| GroupStatus                                  | М        | Status information concerning the group of payment transactions included in the original message |
|  |          | See PaymentGroupStatusCodeT, the value is: "INVL"  |
| StatusReason                                 |          | Filled with the error code   |
| BilaterallyAgreed [11]                       | М        | Error codes specified for AS (see §3.8) (Max4AlphaNumericText)                                   |

3. Building up of output messages

Page **37 of 86** 

## 3.2.3. Building up ASInitiationStatus to reject the input ASTransferInitiation for data error at payment level

The ASInitiationStatus is composed of a first mandatory part (Group level) and an optional repetitive part (Transaction level) :

- GeneralInformation / OriginalGroupReferenceInformationAndStatus
   which identifies the message and refers to the GroupHeader of the original message
- the OriginalPaymentInformation which refers to the payments contained in the original message

In case of error in the input file, the whole file will be rejected but only the erroneous payments will be listed with their error code.

### **Usage of Status and Reason**

In case of error detected in the original message, all of the transactions in the message will be rejected by the ASI:

|                      |                   | Reject of input file for data error  |
|----------------------|-------------------|--|
| Header (Group level) | GroupStatus       | Invalid  |
|                      | StatusReason      | -  |
| Payment level        | TransactionStatus | Invalid  |
|                      | StatusReason      | Error Code   |
| Comments             |                   | All the file is rejected but the repetitive part contents the references of the <b>only erroneous transactions</b> with their error code |

### GeneralInformation

| Field  | M /<br>O | Contents   |
|--|----------|--|
| Sender of the message                        | М        | DN of the ASI  |
| Receiver of the message                      | М        | DN of the sender of the ASTransferInitiation   |
| - GeneralInformation                         | М        |  |
| PaymentInitiationStatusIdentification        | М        | Reference assigned by the ASI to unambiguously identify the status message   |
| CreationDateTime                             | М        | Date and time at which the status message was created by the ASI   |
| - OriginalGroupReferenceInformationAndStatus | М        |  |
| GroupIdentification                          | М        | Filled with the field "GroupIdentification" of the original message.   |
| OriginalMessageType                          | М        | Specifies the message type for which the status is reported ("ASTransferInitiation")   |
| SettlementModelType                          | М        | Identify the procedure of payment indicated in the original message  |
| DecisionIndicator                            | 0        | Not used in this case  |
| GroupStatus                                  | М        | Status information concerning the group of payment transactions included in the original message See below "PaymentGroupStatusCodeT" |
|  |          | The unique value in the present case is: "INVL"  |
| StatusReason                                 | 0        | Must not be used in this case  |
| BilaterallyAgreed [11]                       | М        | Not used in this case  |

| EndToEndIdentification                              | М        | Identification passed on the entire end-to-end chain         |
| TransactionStatus                                   | 0        | Status of a transaction included in the original message     |
|   |          | See "PaymentTransactionStatusCodeT"                          |
|   |          |  |
|   |          | The unique value in the present case is: "INVL"              |
| StatusReason  | 0        |  |
| BilaterallyAgreed [11]                              | М        | Error codes specified for AS (see §3.8)                      |
|   |          | (Max4AlphaNumericText)                                       |
| AdditionalInformation                               | 0        | Free   |

3. Building up of output messages

Page **39 of 86** 

### 3.2.4. Building up ASInitiationStatus to request a decision from the AS

The ASInitiationStatus is composed of a first mandatory part (Group level) and an optional repetitive part (Transaction level) :

- GeneralInformation / OriginalGroupReferenceInformationAndStatus
   which identifies the message and refers to the GroupHeader of the original message
- the OriginalPaymentInformation which refers to the payments contained in the original message

In case of request a decision for the use of the Guarantee Mechanism, the ASInitiationStatus contains the list of all the transactions with the TransactionStatus 'AcceptedSettled" for the debit which are settled and the value "Rejected" for the debit which are not settled and for all the credit transactions.

The value of the DecisionIndicator is "true"

### **Usage of Status and Reason**

|                      |                   | Waiting for decision                           |
|----------------------|-------------------|--|
| Header (Group level) | DecisionIndicator | true   |
|                      | GroupStatus       | PartiallyExecuted                              |
|                      | StatusReason      | -  |
| Payment level        | TransactionStatus | AcceptedSettled                                |
|                      |                   | Rejected                                       |
|                      | StatusReason      | Failure Reason                                 |
| Comments             |                   | The decision of the use of the Guarantee       |
|                      |                   | Mechanism is requested.                        |
|                      |                   | The message lists the references of <b>all</b> |
|                      |                   | transactions with their status                 |

### GeneralInformation

| Field  | M / | Contents   |
|--|-----|--|
|  | o   |  |
| Sender of the message                        | М   | DN of the ASI  |

| InstructionIdentification                           | М   | Identification indicated in the original message                 |
| EndToEndIdentification                              | М   | Identification passed on the entire end-to-end chain             |
| TransactionStatus                                   | 0   | Status of a transaction included in the original message         |
|   |     | See "PaymentTransactionStatusCodeT"                              |
|   |     | For the debit the value is "ACSC" or "RJCT"                      |
|   |     | For the credit the value is "RJCT"                               |
| StatusReason  | 0   | StatusReason is used for rejected debit transactions             |
| BilaterallyAgreed [11]                              | М   | "RDIB" is indicated only for the transactions of debit which are |
|   |     | rejected due to insufficient balance.                            |
|   |     |  |
|   |     | Not used for the transactions of credit which are rejected       |
| AdditionalInformation                               | 0   | Free   |

3. Building up of output messages

Page **41 of 86** 

## 3.2.5. Building up ASInitiationStatus to confirm a complete reject of a file after Reverse

The ASInitiationStatus is composed of a first mandatory part (Group level) and one optional repetitive part (Transaction level):

- GeneralInformation / OriginalGroupReferenceInformationAndStatus
   which identifies the message and refers to the GroupHeader of the original message
- the OriginalPaymentInformation which refers to the payments contained in the original message.

When the ASI receives a Receipt with a negative decision to use the Guarantee account or if there is a lack of liquidity on the guarantee account the "reversing procedure" is initiated and the ASI sends to the AS an ASInitiationStatus with the list of all the transactions.

The reversing procedure is also initiated in case of exclusion of a Settlement Bank or an AS during the waiting of the Receipt from the AS

- The StatusReason at Group level indicates the Reverse Reason :
  - . Negative decision from the AS
  - . Lack of liquidity on the Guarantee account
  - . Exclusion of settlement bank or AS.
- The TransactionStatus of the debit transactions which were previously "AcceptedSettlementCompleted" is changed with the status "Reversed"
- The TransactionStatus of the other transactions remain "Rejected" as previously.

### **Usage of Status and Reason**

|                      |                   | Compete reject after reverse  |
|----------------------|-------------------|---|
| Header (Group level) | GroupStatus       | Reversed  |
|                      | StatusReason      | Global failure reason   |
| Payment level        | TransactionStatus | Reversed<br>Rejected  |
|                      | StatusReason      | Failure reason  |
| Comments             |                   | The reverse reason is 'negative decision' or 'lack of liquidity' on the guarantee account or exclusion of a Settlement Bank or AS. The message lists the references of <b>all transactions</b> with their final status. |

### GeneralInformation

| Field                                 | M /<br>O | Contents   |
|---------------------------------------|----------|--|
| Sender of the message                 | М        | DN of the ASI  |
| Receiver of the message               | М        | DN of the sender of the ASTransferInitiation                               |
| - GeneralInformation                  | М        |  |
| PaymentInitiationStatusIdentification | М        | Reference assigned by the ASI to unambiguously identify the status message |
| CreationDateTime                      | М        | Date and time at which the status message was created by the ASI           |

3. Building up of output messages

Page 43 of 86

## 3.2.6. Building up ASInitiationStatus to confirm an ASTransferInitiation message partially or not accepted

Among the transactions included in the ASTransferInitiation file, some can be executed and others not. The role of ASInitiationStatus is to indicate the list of these transactions with their individual result (Settled or not)

The ASInitiationStatus is composed of a first mandatory part (Group level) and one optional repetitive part (Transaction level) :

- GeneralInformation / OriginalGroupReferenceInformationAndStatus
   which identifies the message and refers to the GroupHeader of the original message
- the OriginalPaymentInformation which refers to the payments contained in the original message.

In case of procedure 3, according to an option in Static Data, the ASInitiationStatus can be global for all transactions or single for each transaction.

During file validation, in case of rejection, only error codes A014, A016, A033 can be rejected single, in other cases, ASInitiationStatus is automatically global. [HD030277].

In case of global notification, the ASInitiationStatus contains all the references of the transactions with their TransactionStatus and StatusReason (in case of reject).

In case of single notification, the ASInitiationStatus contains only the reference of the transaction with its TransactionStatus and StatusReason (in case of reject).

- If a relevant CB revokes a transaction during the information period, the relative ASInitiationStatus is immediately sent to the AS.
- During the settlement period, an ASInitiationStatus is immediately sent after each settlement of a transaction.
- At the end of settlement period, an ASInitiation tatus is sent for each transaction rejected for lack of liquidity or for no reaction of CB in case of exclusion (AS or SB).
- If the end of settlement period is not defined in the AS file, an ASInitiationStatus is sent for each transaction rejected at the end of the day for lack of liquidity or for no reaction of CB in case of exclusion (AS or CB).
- If a transaction is rejected due to disagreement/rejection for exclusion (AS or Settlement Bank) during the processing of the transactions, an ASInitiationStatus is sent immediately for the transaction impacted by this disagreement/rejection.

### **Usage of Status and Reason**

|               |                   | Reject or Partial execution  |

Page **46 of 86** 

## 3.2.7. Building up ASInitiationStatus to confirm or reject the complete ASTransferInitiation message

When the ASInitiationStatus is sent to confirm the execution or reject the complete ASTransferInitiation message, it is reduced to the first mandatory part GeneralInformation / OriginalGroupReferenceInformationAndStatus which contains the GroupStatus and the StatusReason. The repetitive optional parts which refer the transactions are not specified:

### **Usage of Status and Reason**

|          |                   | Complete execution   | Complete reject for failure   |
|----------|-------------------|--|---|
| Header   | DecisionIndicator |  |   |
| (Group   | GroupStatus       | AcceptedSettled  | Rejected  |
| level)   |                   |  | RejectedDisagree  |
|          | StatusReason      | -  | Global failure reason   |
| Payment  | TransactionStatus | -  | -   |
| level    | StatusReason      | -  | -   |
| Comments |                   | All the file is accepted and settled, the message contents <b>only the header</b> with the GroupStatus | All the file is rejected for failure or disagreement, the message contents <b>only the header</b> with the GroupStatus and StatusReason (global failure reason if "Rejected") |

## 3.3. Function "Management of output ASTransferNotice messages"

### 3.3.1. Building up ASTransferNotice sent by the ASI to the AS (procedure 1)

The ASTransferNotice is sent by the ASI to the AS (Real-time Model) to notice the incoming liquidity on the Technical account - procedure 6 real-time from a MT202 sent by a Settlement Bank

The ASTransferNotice is **used as single** as it contains only the data relative to the MT202 sent by a Settlement Bank.

The message contains 2 parts:

- the **GroupHeader**
- the PaymentInformation and PaymentTransaction
  - The Technical account procedure 6 real-time of the AS is specified in the FinalAgent
  - The beneficiary in the SSS is specified as the Creditor

### **ASTransferNotice**

## 3.3.2. Building up ASTransferNotice sent by the ASI to the AS (procedure 6) after standing order execution for Real-time AS

The ASTransferNotice is sent by the ASI to the AS (Real-time Model) to notice the incoming liquidity on the Technical account - procedure 6 real-time after execution of Standing orders.

The ASTransferNotice is **used as single** as it contains only the data relative to each Standing Order defined by the Settlement Banks.

The message contains 2 parts:

- the **GroupHeader**
- the PaymentInformation and PaymentTransaction
  - The Technical account procedure 6 real-time of the AS is specified in the FinalAgent
  - The beneficiary in the SSS is specified as the Creditor

### (1) **DN of the AS** (Real-time Model)

The BIC\_Receiver contained in the Standing order received from Static Data is the BIC of the Technical account - procedure 6 real-time.

With the list received from Static Data, the ASI obtains the DN of the AS which is linked to this Technical account - procedure 6 real-time.

3. Building up of output messages

Page **53 of 86** 

## 3.3.3. Building up ASTransferNotice sent by the ASI to the AS (model 6) after liquidity adjustment from settlement bank via ICM or with an XML SBTI

The ASTransferNotice is sent by the ASI to the AS (Real-time Model) to notice the incoming liquidity on the Technical account - procedure 6 real-time from a current order sent by a Settlement Bank via ICM by the screen "Liquidity Transfer to Technical account - procedure 6 real-time" or with an XML **SBTransferInitiation** 

The ASTransferNotice is **used as single** as it contains only the data relative to the amount sent by a Settlement Bank to a beneficiary in the SSS.

The message contains 2 parts:

- the **GroupHeader**
- the PaymentInformation and PaymentTransaction
  - The Technical account procedure 6 real-time of the AS is specified in the FinalAgent
  - The beneficiary in the SSS is specified as the Creditor

## 3.3.4. Building up ASTransferNotice sent by the ASI to the AS for a Cross-AS settlement (procedure 6)

The ASTransferNotice is sent by the ASI to the AS (Interfaced or Real-time) to notice the incoming liquidity from a cross-AS settlement sent by another AS (Interfaced or Real-time) via an XML ASTransferInitiation.

The ASTransferNotice is **used as single** as it contains the data relative to the amount coming from a sub-account/Technical account - procedure 6 real-time to a sub-account/Technical account - procedure 6 real-time.

The message contains 2 parts:

- the **GroupHeader** 
  - The BIC of the AS sender is filled in the element counterpartAS
- the PaymentInformation and PaymentTransaction
  - The Settlement Bank linked to a Real-time AS sender is filled in the Debtor BIC
  - The Settlement Bank linked to a Real-time AS receiver is filled in the Creditor BIC

#### **ASTransferNotice**

### [CR-493]

The new information "Resulting balance in the credited sub-account (interfaced AS) or Technical account - procedure 6 real-time (Real-time AS) is:

- Allowed and mandatory only for Cross-AS settlement transaction (PaymentScheme code is "CDS") and is not returned for other AS transactions,
- for Real-time and interfaced AS (new balance in Technical account procedure 6 real-time or new balance in sub-account),
- in addition of the amount of the transaction.

3. Building up of output messages

Page **57 of 86** 

## 3.4. Function "Management of output ReturnAccount messages"

## 3.4.1. Building up ReturnAccount to notify funds booked on sub-accounts (Interfaced Models)

The ReturnAccount is a Standard Cash Management message. It is sent by the ASI to the AS (or the CB) in the Procedure 6 to notify the transfers of liquidity on sub-accounts (or main accounts) and the funds booked on the sub-accounts.

The ReturnAccount is sent to the AS **Interfaced models** in the following cases:

- After the execution of Start of Procedure (Night-time)
- Sent to the requestor (AS or CB) of the Start of Procedure in Daylight
- After a current order sent by a Settlement Bank via ICM by a screen "Liquidity Transfer" or with an XML message LiquidityCreditTransfer
- Sent to the requestor (AS or CB) of the Start of Cycle
- After execution of connected payment from CB on SSP account (increase or decrease)
- After execution of increase of liquidity from CB (for REPO countries or for credit line managed in the proprietary home accounting system)
- After execution of automatic increase of liquidity by specific transactions sent by CB on behalf of the AS
- After execution of a Cross-AS settlement request sent by CB on behalf of the AS
- Sent to the requestor (AS or CB) of the End of Procedure to notify the Back Transfer of liquidity
- On an optional basis, after execution of MT202 sent by settlement bank to the ASI to transfer liquidity from its RTGS account to the sub-account (Cycle open or not open).

The AccountReport occurrence can be used as single or multiple as relevant (if several sub-accounts have to be reported to the AS)

The occurrence MultilateralBalance is used to indicate:

### For sub-accounts:

- the amount which has been increased or decreased on the sub-account (code "PYMT") by the last operation
- the new balance on the sub-account (code "BOOK").

#### For main accounts:

- the amount which has been increased on the main account (code "PYMT") by the last operation of increase of liquidity.

### **Use of ReturnAccount message:**

#### For sub-accounts:

The ReturnAccount contains only the AccountReport for the Settlement Banks whose sub-account has been debited or credited in the previous operation: current order, connected payment, increase/decrease of liquidity from CB.

3. Building up of output messages

Page **58 of 86** 

Both of the MultilateralBalances are indicated ("PYMT" and "BOOK").

Following a Start of Procedure or Start of Cycle, the ReturnAccount contents the AccountReport for all the Settlement Banks which have a sub-account dedicated to the AS:

- If the amount on the sub-account is zero, there is no MultilateralBalance
- If the amount on the sub-account is different of zero, there is only the Multilateralbalance "BOOK"
- If there is no sub-accounts, the ReturnAccount is not sent.

Following a request of End of Procedure, the ReturnAccount contains the AccountReport for all the Settlement Banks which have a sub-account dedicated to the AS:

- If there was no Back Transfer of liquidity, there is no MultilateralBalance
- If there was a Back Transfer of liquidity, there is only the MultilateralBalance "PYMT" which indicates this amount.
- If there is no sub-accounts, the ReturnAccount is not sent.

#### For main accounts:

Following an automatic increase of liquidity on main accounts by specific transactions (ie coupons and redemption), the ReturnAccount contains the AccountReport for the Settlement Banks whose main account has been credited.

For these main accounts, only the MultilateralBalance "PYMT" is indicated.

#### ReturnAccount

## 3.4.2. Building up ReturnAccount to notify the global funds blocked on the Technical account - procedure 6 real-time (Real-time Models)

The ReturnAccount is sent by the ASI to the **Real-time models** AS in the Procedure 6 to notify the liquidity on the Technical account - procedure 6 real-time, it is sent in the following case:

- After execution of the Start of Cycle
  - First cycle: Liquidity from standing orders and current orders executed since the Start of Procedure
  - Following cycles: Liquidity from current orders executed since the last End of cycle

The AccountReport occurrence is used as single.

The occurrence MultilateralBalance indicates:

- the new balance on the Technical account - procedure 6 real-time (code "BOOK")

# 3.6. Function "Management of output ReturnGeneralBusinessInformation messages"

The **ReturnGeneralBusinessInformation** is a **Standard CashManagement message** used by the ASI to send the notifications of the following actions executed on the SSP:

- Sent to the AS to notify the Start of night-time procedure triggered by the ASI at the start of day
- Sent to the requestor (AS or CB) of the End of Cycle ordered via ASI or via an ICM screen (night-time and daylight).

### ReturnGeneralBusinessInformation

## 3.7. Function "Management of output MT 900/910 FIN messages"

The optional MT900/MT910 are available only for SWIFT-based settlement banks.

### 3.7.1. Building up MT 900 to notify funds debited from Settlement Banks

The MT 900 is sent by the PM to the Settlement Banks to notify on an optional basis the funds debited from the **main RTGS account**.

The MT 900 is sent in the following cases:

- In the Real-time settlement (Procedure 2)
- In the Bilateral settlement (Procedure 3)
- In the Standard multilateral settlement (Procedure 4)
- In the Simultaneous multilateral settlement (Procedure 5)
- In the execution of the Standing orders (Procedure 6)
- In the execution of the Current orders for increase ( Procedure 6)
- In the execution of Connected Payments options II a and b
- In the execution of Mandated payments via ASI to a Technical account procedure 6 real-time (procedure 1 or 6) or sub account (procedure 6).

[CR 339] Due to the CR 339, the execution of an MT202 received during the Daylight procedure will no longer impact the MT900 "Debit Advice".

The MT 900 is sent by the PM to the Settlement Banks to notify the funds debited from the **sub-accounts**.

The MT 900 is sent in the following cases:

- In the execution of the Current orders for decrease (Procedure 6 Interfaced Models)
- In the execution of reverse Connected Payments options II a and b
- In the execution of settlement in procedure 6
- In the End of Procedure for the Back Transfer of liquidity
- In the execution of a CROSS-AS (AS sender is Interfaced)

#### MT900

### 3.7.2. Building up MT 910 to notify funds credited to settlement banks

The MT 910 is sent by the PM to the settlement banks to notify on an optional basis the funds credited to the **main RTGS account**.

The MT 910 is sent in the following cases:

- In the Real-time settlement (Procedure 2)
- In the Bilateral settlement (Procedure 3)
- In the Standard multilateral settlement (Procedure 4)
- In the Simultaneous multilateral settlement (Procedure 5)
- In the execution of the Current orders for decrease ( Procedure 6 Interfaced Models)
- In the execution of reverse Connected Payments options II a and b
- In the automatic increase of blocked liquidity by specific transactions
- In the End of Procedure for the Back Transfer of liquidity.

The MT 910 is sent by the PM to the settlement banks to notify the funds credited to the **sub-accounts**.

The MT 910 is sent in the following cases:

- In the execution of the Standing orders (Procedure 6)
- In the execution of the Current orders for increase ( Procedure 6)
- In the execution of Connected Payments options II a, b and c
- In the automatic increase of blocked liquidity by specific transactions
- In the execution of settlement in procedure 6
- In the execution of MT202 received during daylight procedure to credit sub-accounts.
- In the execution of a CROSS-AS (AS receiver is Interfaced)

### MT910

| Tag | M /<br>O | Field                        | Contents   |  |  |
|-----|----------|------------------------------|--|--|--|
|     | M        | Sender of the message        | The sender is the BIC : TRGTXEPMASI  |  |  |
|     | М        | Receiver of the message:     | The receiver is the BIC of the Settlement Bank for which the account or the sub-account has been credited  |  |  |
| 20  | M        | Transaction Reference Number | Reference assigned by the ASI to unambiguously identify the message: - 'AS' - the next 8 characters are the timestamp in the PM 'ddhhmmss' - the last 6 digits are the PM payment reference '123456' (ex: ASddhhmmss123456)  Internal SSP reference when: - End of Procedure triggered by SSP - MT202 sent by a Settlement Bank  |  |  |
| 21  | М        | Related reference (16x)      | <ul> <li>Execution of Standing orders and current orders sent via ICM screens (U2A):         <ul> <li>Internal SSP reference</li> </ul> </li> <li>Execution of LiquidityCreditTransfer sent in A2A via ICM         <ul> <li>Copy of MessageIdentification</li> </ul> </li> <li>MT202 sent by a Settlement Bank         <ul> <li>Copy of field 20 of MT202</li> </ul> </li> </ul> |  |  |

Others cases: Copy of EndToEndIdentification contained in the ASTransferInitiation message   |
|-----|---|-----------------------------------|--|
| 25  | М | Account Identification            | Main RTGS account number or sub-account number which has been credited   |
| 32A | М | Value Date, Currency code, Amount | Amount of the credit Only current day Payment must be denominated in euro only   |
| 50a | 0 | Ordering Customer                 | Not used   |
| 52A | 0 | Ordering Institution              | <ul> <li>Execution of Standing orders and current orders sent by Settlement Banks via ICM:         BIC of the Settlement Bank</li> <li>Execution of LiquidityCreditTransfer sent in A2A via ICM by Settlement Bank         BIC of the Settlement Bank</li></ul> |
| 56a | 0 | Intermediary                      | Not used   |
| 72  | 0 | Sender to Receiver Information    | Specific code-words are used to map this field with Creditor (field 58) and RemittanceInformation (field 72) if they are filled in the initial message (see § 3.7.3)   |

3. Building up of output messages

Page **69 of 86** 

### 3.7.3. Field 72 of MT 900/910

- The optional elements (Debtor, Creditor and RemittanceInformation) of the ASTransferInitiation and SBTransferInitiation are mapped in the field 72 of the MT 900/MT910.
- For the AS Real-time, the fields 52/58 and 72 of the standing orders and the Liquidity Transfer to Technical account - procedure 6 real-time are also mapped in the field 72 of the MT 900/MT 910.
- For the MT202, the fields 52/58 and 72 are also mapped into the field 72 of the MT 900/910.

#### 3.7.3.1. Codewords:

If Debtor (field 52) and Creditor (field 58) are filled, they are sent in field 72 with the following codewords:

- o In the MT 900: /ASDEBT/ (debtor or 52)
- In the MT 910: /ASCRED/ (creditor or 58)

If RemittanceInformation (field 72) is filled, it is sent in field 72 with the following code word:

- o In MT 900/910: /ASINF/ (RemittanceInformation or field 72)
- [CR 329] In the MT900/910, In case of Mandated payment the codeword /MANPAY/ is added just before /ASINF/

### 3.7.3.2. Normalisation for codewords /ASDEBT/ and /ASCRED/:

Debtor and Creditor contain the following optional elements:

#### Debtor

- o Name (62x)
- o BIC (11x)
- DomesticAccountIdentification (35x)

### Creditor

- Name (62x)
- o BIC (11x)
- DomesticAccountIdentification (35x)

The separator "+" is used to distinguish the 3 optional elements of Debtor and Creditor. The maximal length of each allowed data combination for debtor or creditor parameters is:

| Data combinations                      | Maximal length |
|--|----------------|
| Name+BIC+DomesticAccountIdentification | 110x           |
| Name+BIC+                              | 74x            |
| Name+DomesticAccountIdentification     | 99x            |
| Name++                                 | 62x            |
| +BIC+DomesticAccountIdentification     | 48x            |
| +BIC+                                  | 12x            |
| + +DomesticAccountIdentification       | 37x            |

3. Building up of output messages

Page **70 of 86** 

In case of field 52 or field 58, the data is "+BIC"

The data relative to Debtor and Creditor are sent in MT 900/910 without truncation. These data are always mapped at the beginning of the field 72, according to their length they occupy from the 1<sup>st</sup> to the 4<sup>th</sup> line.

Example with the maximum data length (110x):

```
/ASDEBT/ 27x
// 33x
// 33x
// 17x
```

#### 3.7.3.3. Normalisation for the code-word /ASINF/:

In ASTransferInitiation, the format of RemittanceInformation is: 140x

As the field 72 is limited to 6 lines of 35x, the RemittanceInformation will be truncated according to a dynamically handling of the remaining lines of field 72 after the code words /ASDEBT/ or /ASCRED/.

If there is a "CRLF" in the RemittanceInformation it will be replaced by a "space" character in field 72.

The length of the RemittanceInformation will be from 61 characters to 140 characters according to the number of free lines following /ASDEBT/ or /ASCRED/.

| Minimum and maximum lengths of RemittanceInformation |  |  |  |  |
|--|--|--|--|--|
| Minimum: 61 characters (Maximum truncation)          | Maximum:140 characters (No truncation) |  |  |  |
| /ASDEBT/ 27x   | /ASDEBT/ 27x                           |  |  |  |
| // 33x<br>// 33x                                     | /ASINF/ 28x<br>// 33x                  |  |  |  |
| // 17x<br>/ASINF/ 28x                                | // 33x<br>// 33x                       |  |  |  |
| // 33x   | // 13x                                 |  |  |  |

Page **74 of 86** 

# 3.8. Function "Management of output MT 940/950 FIN messages"

The **field 61** of MT 940 / 950 has specific mapping rules for AS transactions:

#### Sub-field 6:

**'S202':** for transactions sent by a settlement bank (MT202, SBTransferInitiation, LiquidityCreditTransfer, U2A) to debit its own RTGS account

**'\$204':** for all other operations ordered by a third party (AS, CB or PM).

#### Sub-field 7:

- 'Tag 20' for MT202
- 'Message Identification' for SBTransferInitiation and LiquidityCreditTransfer
- 'SSP internal reference' for U2A, standing orders and operations ordered by PM
- **'BusinessInformationReference'** for end of procedure requested via ReturnGeneralBusinessInformation
- **'EndToEndIdentification'** for all other cases (requested by ASTransferInitiation)

#### Sub-field 8:

'SSP internal reference'

#### Sub-field 9:

[CR 329] /MANPAY/ for MT202 sent by CB "Mandated payment" to dedicated account (Technical account - procedure 6 real-time and sub accounts)

<SB BIC>/HHMMSS: for 'S202' messages

**PM BIC>/HHMMSS:** for standing orders and for emergency procedure launched automatically by PM (ex: if End of Procedure has not been sent by the AS before the end of day)

<AS BIC>/HHMMSS: for messages sent by AS

<CB BIC>/HHMMSS/<AS BIC>: for messages sent by CB on behalf of the AS

### 3.9. List of specific AS error codes

This list defines the codes relative to the error detected by the ASI module. They are used in StatusReason (Group level or Payment level) of ASInitiationStatus and in the Receipt message. This list is used in addition to the generic codes which are common with other modules in the SSP.

| XML error code | Description  |  |
|----------------|--|--|
| A001           | Sender not allowed   |  |
| A002           | AS missing or not allowed in InitiatingParty / SubjectDetails                          |  |
| A003           | Invalid date   |  |
| A004           | Invalid ControlSum   |  |
| A005           | Invalid NumberOfTransactions   |  |
| A006           | Invalid PriorityType   |  |
| A007           | Invalid SettlementModelType  |  |
| 800A           | SettlementModelType not allowed for the sender   |  |
| A009           | Invalid InformationPeriodType  |  |
| A010           | Invalid FromTime   |  |
| A011           | Invalid ToTime   |  |
|                | [HD021546]   |  |
| A012           | Invalid GroupIdentification  |  |
| A013           | Invalid PaymentScheme code   |  |
| A014           | FirstAgent not allowed   |  |
| A015           | FirstAgent domestic account not allowed  |  |
| A016           | FinalAgent not allowed   |  |
| A017           | FinalAgent domestic account not allowed  |  |
| A018           | FirstAgent and FinalAgent accounts must be different                                   |  |
| A019           | Double GroupIdentification   |  |
| A020           | Double payment identification  |  |
| A021           | Value date in the past or too far in the future  |  |
| A022           | Currency is not EUR  |  |
| A023           | Sum of debit from technical account is not equal to sum of credit to technical account |  |
| A024           | Amount unavailable   |  |
| A025           | DebitAccountOwner not allowed  |  |
| A026           | CreditAccountOwner not allowed   |  |
| A027           | Debit DomesticAccount not allowed  |  |
| A028           | Credit DomesticAccount not allowed   |  |
| A029           | The qualifier must be formatted  |  |
| A030           | Code unknown   |  |
| A031           | Reference unknown  |  |
| A032           | Invalid StatusCode   |  |
| A033           | Inconsistency between SettlementModelType, FirstAgent and FinalAgent                   |  |
| A034           | Order or message out of sequence   |  |
| A035           | Procedure already open   |  |

#### 3. Building up of output messages

Page **76 of 86** 

| A037 | Cycle already open  |
|------|---|
| A038 | Cycle already closed  |
| A039 | AS excluded   |
| A040 | The AS is not authorized to request a Connected payment   |
| A041 | Debtor BIC is not a published SWIFT BIC   |
| A042 | Creditor BIC is not a published SWIFT BIC   |
| A043 | Number of transactions is too high  |
| A049 | It is not possible to revoke one single transaction in model 4 and 5.                             |
| A050 | Revoke is only usable for files referring to settlement procedure 4 and 5.                        |
| A051 | Revoke is only possible if status of file is "information period"                                 |
| A052 | File not found  |
| A053 | Change settlement period is possible only if settlement period is defined                         |
| A054 | Requested time for end of settlement period is not possible before end of information period.     |
| A055 | Requested time for end of settlement period is not possible in the past.                          |
| A056 | Related AS does not participate in settlement procedure 6 Real-time.                              |
| A057 | FinalAgent must be a Technical account - procedure 6 real-time.                                   |
| A058 | Settlement bank is not allowed to address this Technical account - procedure 6 real-time          |
| A070 | Counterpart AS does not contain a valid AS BIC in relation with the sender                        |
| A071 | Counterpart AS forbidden for transactions other than cross-AS settlement                          |
| A072 | Debtor BIC is not a Settlement Bank linked to the Real-time AS sender of cross-AS settlement      |
| A073 | Creditor BIC is not a settlement bank linked to the Real-time AS receiver of cross-AS settlement  |
| A080 | Daylight settlement period has not started  |
| A081 | Lack of liquidity on the guarantee account  |
| A082 | AS decision to use guarantee account was negative   |
| A083 | Generic error   |
| A084 | Payment reject at end of day  |
| A085 | The payment is rejected because the settlement period time is reached                             |
| A086 | The payment has been revoked  |
| A087 | Rejection after reversing procedure   |
| A088 | Payment initiation or individual transaction included in the payment initiation has been rejected |
| A089 | Invalid file or transaction   |
| A090 | Current Order partially settled   |
| A091 | Accepted, settlement completed  |
| A092 | The file/transaction is rejected because the AS is excluded                                       |
| A093 | File/transaction was revoked by the CB after disagreement   |
| A094 | AS with procedure 6 – real-time cannot close the procedure  |
|      |   |

### 3.10. List of Broadcast messages

The broadcast messages are customized with the following parameters from ASTransferInitiation:

[BIC of AS] BIC of the AS concerned

[GroupIdentification] Reference of the ASTransferInitiation

[FromTime] Start of settlement time (end of Information Period time)

[InstructionIdentification] Reference of the payment in the file

[EndToEndIdentification]Related Reference[Amount]Amount of the payment[FirstAgent]Account debited in SSP[FinalAgent]Account credited in SSP

[BIC of the SB] BIC of the Settlement Bank excluded

[XXXX] StatusReason at Group level

| N° | Receiver            | Subject                                       | Text  |   |

4. Contingency mode

Page **86 of 86** 

### 4. Contingency mode

[CR-543]

In case of SWIFTNet outage, contingency mode is manually activated for the concerned CB. AS unable to access the PAPSS have to transmit via contingency mean their instructions to their CB.

Via an ICM screen the CB sends messages on behalf the AS, i.e. the CB adds the AS BIC in the initiating party.

#### Input messages

Via ICM screen "CONTINGENCY FILE UPLOAD", files can be uploaded. The files are built with the same payloads as the ones used in SWIFTNet mode. The files are controlled exactly the same way as if they were sent in SWIFTNet mode, the result of the controls: StatusCode and Description, is displayed in ICM screen "CONTINGENCY FILE UPLOAD".

CB or OT can only upload the following kind of files:

- ASTransferInitiation ( see controls described §2.1.2)
- Receipt for decision to use the Guarantee mechanism ( see controls described §2.2.2)

MT202, SBTransferInitiation and LiquidityCreditTransfer are not taken into account in contingency mode.

ReturnGeneralBusinessInformation is not taken into account in contingency mode. But the same functions are assumed by action buttons in screen "Enter Start End of Cycle / Procedure". (Ticket 36589)

#### Output messages

No notification is sent to AS or to SB.

The following kinds of message are not taken into account:

- MT202
- ASInitiationStatus
- ASTransferNotice
- ReturnAccount
- Receipt
- MT 900/910
- MT 940/950

#### **Broadcasts**

As it is sent via ICM, this information remains generated.
